

PLANT GUIDE Winter

China is home to more than 30,000 plant species – one-eighth of the world's total. At Lan Su, visitors can enjoy hundreds of these plants, many of which have a rich symbolic and cultural history in China. This guide is a selected look at some of Lan Su's current favorites.

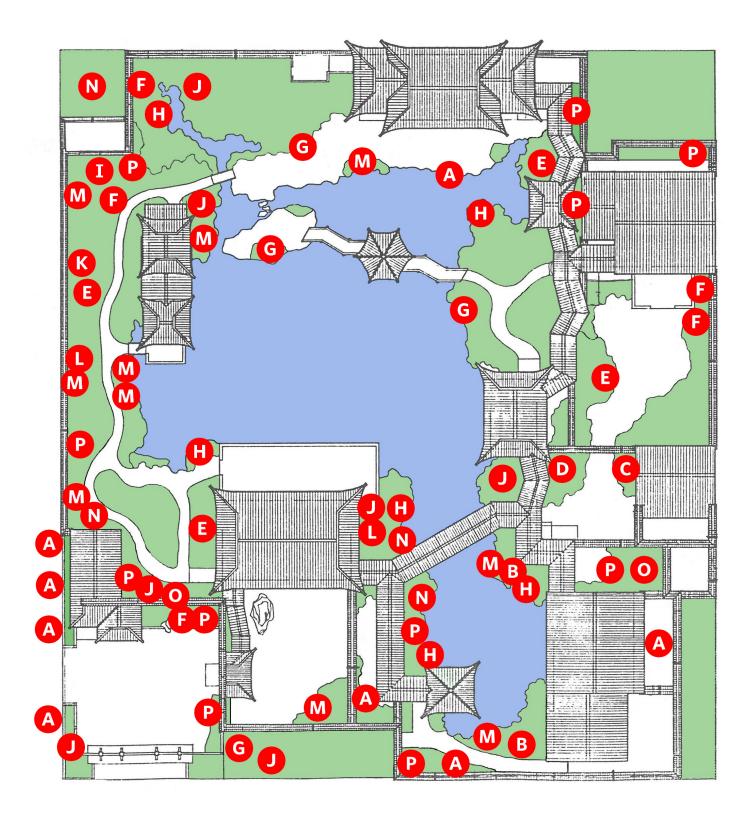

- A Heavenly Bamboo
- Bohdea
- Loquat

Ohinese Fringe Flower

- Berberis
- Chinese Plum
- Sweet Box
- N Chinese Paper Bush

- **©** Wintersweet
- G Shore Pine
- Noebe
- O Lacebark Pine

- D Lushan Honeysuckle 🕕
- Winter Jasmine
- - Japanese White Pine P Bamboo

PLANT GUIDE

Winter

HEAVENLY BAMBOO

(Nandina domestica)

A welcome sight in winter with its clusters of berries, Nandina has been cultivated for centuries in Chinese Gardens. Around Chinese New Year the festive berry sprays are displayed indoors in flower arrangements and as altar decorations.

ROHDEA

(Rohdea japonica)

A member of the Lily family, this evergreen plant has thick strappy leaves and spikes of bright red berries in winter. In China, they are traditionally given as a gift to mark a happy occasion and to bring good fortune.

BERBERIS

(Berberis lomarifolia, B. fortunei)

A relative of Oregon grape (B. aquifolium), this mahonia has long been used in Chinese gardens. It has spiny evergreen leaves and upright, clusters of bright yellow flowers in winter. Flowers produce blue berries and new red growth appears in spring. Notice the ornamental bark too!

CHINESE PLUM

(Prunus mume, P. mume 'Kobai', P. mume 'Alba')

One of the most culturally significant plants in China, P. mume is one of the "Three Friends of Winter" (along with pine and bamboo) given its ability to flower in the coldest months. The flower's five petals also represent the five blessings of longevity, health, wealth, love of virtue and a good end to life.

WINTERSWEET

(Chimonanthus praecox)

In China, C. praecox is the floral symbol of the twelfth lunar month. Its waxy yellow flowers appear during the coldest months of the year and provide a deliciously sweet fragrance. Used commonly as a plum substitute and its many symbolic meanings.

SHORE PINE

(Pinus contorta ssp. contorta)

Although this species is not native to China, pines are an important design element of a Chinese garden and a traditional symbol of strength. Each of the garden's shore pines has a different growth habit typical of the species and years of pruning.

LUSHAN

HONEYSUCKLE

This deciduous to semi-evergreen shrub produces tubular white flowers that run the length of vigorous, vinelike branches during winter. Its sweet and fresh fragrance can be detected even on cold, rainy days.

WINTER JASMINE

(Jasminum nudiflorum)

Look for this plant along the water's edge where its yellow flowers cascade down over the rocks. Blooming during the coldest time of year, this hardy jasmine is also a valuable food source for the hummingbirds that visit the garden year round.

PLANT GUIDE

Winter

LOQUAT

(Eriobotrya japonica)

This rose-family tree is native to south-central China. It has large, serrated deep green leaves and fragrant flowers late in the fall. In mild winters, it may produce a small yellow edible

CHINESE FRINGE **FLOWER**

(Loropetalum chinense, various cultivars)

Native to China, this evergreen shrub is a witch hazel family member. Strappy, bright pink flowers arrive in a flurry in April and continue sporadically through summer and fall.

SWEET BOX

(Sarcococca confusa, S. ruscifolia, S. hookeriana var. humilis)

Native to western China, this evergreen shrub has a small white flower with a strong, sweet fragrance. It blooms in winter followed by blue-black berries in summer. Tolerant of shade and semidry conditions.

CHINESE PAPER BUSH N

(Edgeworthia chrysantha)

Native to China, this deciduous shrub is a relative of sweet Daphne. In winter, frosty silver buds open to clusters of intoxicatingly fragrant, yellow or orange flowers. The Chinese made paper from this plant by pounding flat the stems.

PHOEBE

(Phoebe chekiangensis)

This evergreen tree is a member of the Laurel family and one of the Garden's rarest plants. The "nan" wood that is used to make fine Chinese furniture and musical instruments comes from a closely related species of this plant.

LACEBARK PINE

(Pinus bungeana)

Native to China, mature specimens of this species are rarely found in the United States. It often grows as a multi trunk tree with needles in bundles of three. Its most outstanding ornamental quality is its multi-colored bark that naturally flakes off in a lacelike pattern.

JAPANESE WHITE PINE 💶

(Pinus parviflora)

The pine has long been revered by the Chinese as a symbol of longevity. This five-needled pine has foliage with a distinctive white stripe and bluish hue. Its graceful branch pattern and evergreen foliage are something to admire in the cold, winter months.

BAMBOO

(multiple species, see master species list)

Bamboo is admired in China for its flexible nature and ability to return to its upright position after challenging circumstances, or bend without breaking. It has many uses, from food to medicine to building material, and more. Bamboo is in the Poaceae, or grass, family. It flowers after 60-130 years depending on species, and then dies.
